#### 1.2 Capital Adequacy

The Bank is required to calculate and report capital adequacy ratio to Bank of Thailand on a monthly basis, and is required to maintain a minimum Capital Adequacy Ratio of 11% since year 2019, with the minimum ratio of Common Equity Tier 1 and Tier 1 capital to risk weighted assets at 7.0% and 8.5% respectively according to Basel III/Pillar I. The Bank actively monitors and ensures capital above the minimum requirement. As of Dec 31, 2021, The Bank's Capital Adequacy Ratio (CAR) was 19.75%.

For each risk type under Pillar I, The Bank adopts the following approaches to calculate the regulatory capital requirements:

Credit Risk: Standardized Approach

Market Risk: Standardized Approach

Operational Risk: Basic Indicator Approach

The Bank's Capital adequacy ratio is shown in Table 2. The minimum capital requirements for credit risk, market risk and operational risk at the end of 2019 and 2020 are shown in Table 3

## 2. Risk Exposure and Assessment

## 2.1 Credit Risk

Credit risk is the risk of loss that a customer or counterparty is unable to or unwilling to meet its contractual obligations. Credit risk exists in the trading book and banking book, as well

as from on- and off-balance sheet transactions of the Bank. It arises principally from lending, trade finance and treasury businesses.

#### 2.1.1 Credit Risk Management Process

The Bank has established credit risk management framework to achieve and maintain high quality credit assets. The framework stipulates the establishment of comprehensive credit policy and procedures, which include independent credit review process, credit approval process, proper credit monitoring and risk reporting mechanism, as well as adequate risk mitigation measures. In order to provide a sound control environment with clear segregation of duties to ensure effective credit risk management process, the Bank has set up the following credit risk management structure:

- The Board of Directors and Risk Oversight Committee (ROC) are responsible for overseeing and supervising the Bank's overall credit risk management, as well as reviewing and approving high level risk exposures.
- Country Head is responsible for managing the Bank's credit risk and approving risk
  exposures or transactions within his authority. The Bank's senior management is
  responsible for approving the detailed credit risk management procedures.
- The business units are responsible and accountable for conducting internal credit ratings, assessing, monitoring and reporting credit risk of customers on an ongoing basis.
- Risk management unit is responsible for undertaking risk assessment independently, monitoring credit risk profiles, approving internal ratings, loan grades and impairment allowance. The credit risk management function is in charge of formulating credit risk management procedures, conducting portfolio management and performing stress test on credit risk. It is also responsible for reporting to the senior management and the risk management unit of the parent bank.

#### 2.1.2 Credit Asset Classification and Impairment

The Bank pursues asset grades to reflect asset quality in accordance with BOCHK's guidelines of asset classification and requirements from BOT. The BOCHK divides asset into five-category (Pass, Special Mention, Sub-Standard, Doubtful and Loss), while BOT classified asset into 3 stages (Stage 1: Performing, Stage 2: Under-performing and Stage 3: Non-performing).

The credit assets are classified by taking into consideration quantitative measure such as the length of days which the principal or interest of credit facility is past due and qualitative measures such as the Significant Credit Deterioration Criteria (SCDC)

To comply with the requirements of Thai Financial Reporting Standard 9 (TFRS 9), the Bank assesses the expected credit loss (ECL) impairment of its credit assets regularly to reflect changes in credit risk since initial recognition which the Bank has adopted ECL% proxy approach from BOCHK to apply for estimation of credit loss.

The Bank calculates the ECL for Stage 1 exposures and Stage 2 exposures by assessing relevant credit information like forward-looking macroeconomic factors and obligors' credit information. ECL for Stage 3 exposures are assessed by considering future discounted cash flow.

Stage 1 exposures shall recognize ECL impairment within the next 12 months while Stage 2 exposures and Stage 3 exposures shall recognize lifetime ECL impairment.

#### 2.1.3 Credit Rating

When calculating the risk weighted assets (RWA) using the standardized approach (SA) under Basel III, the Bank uses credit ratings from qualified External Credit Assessment Institutions (ECAIs) specified by the BOT:

- Public sector and financial institution borrowers: S&P, Moody's, Fitch and Fitch (Thailand);
  - Private sector borrowers: TRIS, Fitch, Fitch (Thailand), S&P and Moody's;

Corporate Business Department is responsible for collecting external rating of corporate customers; Risk Management Department is responsible for collecting external rating of financial institutions, PSEs, central banks, and sovereigns.

The Bank follows the process of mapping the ECAI ratings with corresponding borrower's risk weights prescribed by BOT.

#### 2.1.4 Credit Risk Mitigation

Main types of collateral taken by the Bank include cash, counter guarantee from other financial institutions, corporate guarantee, and mortgage. The cash collateral shall be deposited and pledged for control. Counter guarantee from financial institutions shall be controlled by Head Office, and the Bank shall review each guarantor quarterly case by case. Main types of guarantor include personal guarantor, corporate guarantor, and financial institutions.

#### 2.2 Market Risk

Market risk is defined as the risk of potential losses of the bank arising from the price volatility or position value including assets, liabilities and contingent liabilities held by the bank. Market risk factors affecting such price or value are change in interest rate, foreign exchange, equity price and commodity price.

BOCT market risk consists of Interest Rate Risk (IRR) and Foreign Exchange (FX) Risk in the Trading Book and Banking Book. IRR refers to the risk of loss due to shifts in the benchmark rate, causing depreciation of values of interest rate-based asset classes. FX risk refers to the risk of loss to an investment due to changes in the currency exchange rate in which the investment is priced. Currently, BOCT adopts the Standardized Model to quantify its Market risk RWA and Capital requirement. Market risk RWA arises solely out of FX Spot, forwards and currency swaps, even though the aggregate foreign currency exposure is small compared to the size of the overall portfolio, The Bank has implemented the following market risk control:

- Establishing Market Risk Limits, e.g. Bank-wide FX Exposure, Trading Book FX Exposure,
   Profit/loss Limit, Value at risk (VaR), Price Value of Basis Point (PVBP).
- The Bank has established the Market risk management policy approved by BODs to ensure having an appropriate framework and management system for managing and controlling market risk.
- Global Markets Department is responsible for monitoring and reporting market risk related transactions, and ensuring that the level of market risks is within the risk limits determined by BODs.
- Risk Management Department are responsible for implementing market risk management policies, and identifying, measuring, monitoring, controlling and reporting market risk exposures.

#### 2.3 Operational Risk

Operational risk is defined as the risk of loss resulting from inadequate or failed internal processes, people and systems or from external event. It includes Legal and Compliance risk and IT risk, but excludes Strategic and Reputational risk.

All business units and staffs are responsible for systematically managing operational risk according to The Bank's Three Lines of Defense. The Bank stipulated policy and measure of operational risk which cover all major operational risk points and each department shall monitor its operational risk management according to this policy and measure.

Operational risk management tools such as Risk And Control Assessment (RACA), Key Risk Indicators and Loss Data Collection are used to identify, assess and monitor operational risk exposures. Operational risk incidents that have significant impact shall be closely monitor and report to senior management and Risk Oversight Committee.

In year 2021, the potential for high-impact, remote-probability events remains, but day-to-day operational risk has largely been mitigated by effective control and management. Moreover, BOCT is cognizant of the reputational risks posed by money laundering activities and customer complaints. Accordingly, it has maintained and developed policies and processes to control these risks. The Market Conduct Policy has been enforced to ensure the soundness of the Bank's operation and process and aims to standardize procedures of management on fair customer treatment.

BOCT currently adopts the Basic Indicator Approach ("BIA") to quantify its operational risk RWA and Capital requirement.

#### 2.4 Interest Rate Risk in the Banking Book (IRRBB)

Interest rate risk refers to losses of earnings and /or economic value of BOCT as a result of changes in interest rates, which can be incurred from on and off-balance sheet exposures in banking book. The objective of IRRBB is to control the movement of interest rate within acceptable level as well as in line with business strategies and risk appetite and tolerance as was endorsed by Board of director. The Bank manages the interest rate risk of the banking book primarily through interest rate re-pricing gap analysis. The data generated by gap analysis is used to perform sensitivity analysis, assist decision making regarding the re-pricing of the interest-earning assets and interest-bearing liabilities. BOCT currently monitors IRRBB on daily basis at 100 bps by following the Group's regulation and BOT's regulation. Moreover, ALCO regularly evaluates cost of fund and use of fund in order to maintain the appropriate interest rate regarding to risk appetite of BOCT.
